FL-30

Architectural Linear Diffuser, Aluminum, 3" Slot

Titus FlowBar architectural linear diffuser system maximizes engineering performance without sacrificing aesthetic considerations for the designer. FlowBar's outstanding performance allows higher air flows than conventional linear diffusers. The wide array of slot widths allow for more CFM per linear foot while minimizing noise and pressure loss. The Flowbar system is available in continuous linear, incremental linear and square configurations.

FEATURES AND BENEFITS

- Multiple frame styles available to complement various ceiling types
- All FlowBar systems are available curved
- Directly connected to the ceiling support components ensuring straight and true installations
- Integral pattern controllers are on standard 24-inch centers, allowing the airstream to be directed left and right for horizontal and vertical airflow
- Mitered corners, mitered tees and butt ends are available
